CAPABILITIES

WOMEN-OWNED BUSINESS

interlace

AI STRATEGY • INTEGRATION • IMPACT

Modernize without replacing

Legacy systems, *intelligently woven.*

We connect the systems you already depend on to the next generation of intelligent automation, threading platforms, data and teams into one structure that holds.

01 Systems integration

02 Intelligent automation

03 Data pipelines

04 Legacy modernization

INTER · LACE

To cross separate strands into a single connected structure, *stronger and more capable than any one strand alone.*

Integration

Disparate systems, teams and data brought into one cohesive whole.

Interdependence

Parts that reinforce each other rather than standing alone.

Craft

Deliberate, patterned weaving, never a random mix.

CAPABILITIES

The connective layer your operation is missing

We work where the seams are: between the system of record, the shop floor, the spreadsheet and the model.

01

Systems integration

ERP, MES, WMS, mainframe and homegrown platforms brought into one coherent data fabric, without a rip-and-replace program.

02

Intelligent automation

AI-assisted workflows that act on real operational data, with humans kept in the loop where judgment matters.

03

Data pipelines & reconciliation

Reliable movement, cleansing and reconciliation across systems never designed to talk, with lineage and audit trails.

04

Legacy modernization

Incremental migrations that de-risk change and preserve the institutional logic wired into your platforms.

APPROACH

Three passes of the shuttle

Engagements are scoped in increments that each stand on their own. You are never one big-bang cutover away from value.

01

Trace the threads

We map the systems, data and hand-offs already in place, including the spreadsheets and workarounds nobody documented.

- System and data inventory
- Process and hand-off mapping
- Automation opportunity scoring

02

Weave the connections

We build the integration layer and the first automations against real workloads, in short, verifiable increments.

- Integration layer build
- Pilot automation in production
- Human-in-the-loop controls

03

Strengthen the fabric

We harden, document and hand over, so the structure holds without us standing next to it.

- Monitoring and runbooks
- Team enablement
- Roadmap for the next increment

FOUNDER

“For more than a decade, I worked inside these systems and led the people through the change around them. With Interlace Applied, I now build them.”

June J. Lee
Founder & Chief Executive Officer

More than eleven years of operations and HR leadership at UBS, Angelo, Gordon & Co. and VanEck. June led a firm-wide Workday implementation, automated legacy compensation processes and owned regulatory and client due-diligence reporting. B.S., New York University.

CERTIFICATIONS

A women-owned partner your diversity program can count

Interlace Applied is 100% women-owned and women-led. Engaging us helps your spend count toward supplier diversity targets, and positions us for opportunities set aside for women-owned businesses once certified.

Women-owned business

WBENC Women's Business Enterprise (WBE) and Women-Owned Small Business (WOSB) certification in progress.

Supplier diversity ready

Built to meet Fortune 500 supplier diversity program requirements and diverse-supplier portals.

RFP differentiator

Engaging us counts toward your diversity spend reporting, a meaningful tiebreaker on competitive bids.

Federal ready

SAM.gov registration for all federal awards in progress. Primary NAICS 541511.

Let's find the seams *worth closing.*

Bring us your hardest integration, the one everyone routes around. We'll tell you honestly what it takes to automate it.
